

ONE CLICK METAL

made with mind

HEATING MODULE

for printing with optimized temperatures

Less internal stresses

The Heating Module allows to preheat the build plate. This reduces the temperature gradient and thus also residual tensile and compressive stresses.

Improving application qualities:

Lower temperature gradients due to the flexible preheating with the Heating Module will improve the quality of certain components.

Easy integration

The Heating Module has a perfect compatibility with the MPRINT+ which means that it can be installed quickly and easily.

Technical data

Building area (LxWxH)

150mm x 150mm x 150mm

Heating temperature

up to 200°C

Preheating time

maximum 60 minutes
